

The diagram illustrates Bayes' Theorem with the following components:

- Posterior:** $P(A | B)$ is labeled in red as "posterior belief in A after seeing B ". A red arrow points from this text to the expression.
- Likelihood:** $P(B | A)$ is labeled in blue as "likelihood how probable B is if A is true". A blue arrow points from this text to the expression.
- Prior:** $P(A)$ is labeled in green as "prior belief in A before seeing B ". A green arrow points from this text to the expression.
- Evidence:** $P(B)$ is labeled in orange as "evidence how probable B is overall". An orange arrow points from this text to the denominator.

$$P(A | B) = \frac{P(B | A) \times P(A)}{P(B)}$$
