
what will we run?
engine and its defaults
test a ROS 2 robot stack, such as Nav2
Gazebo Sim
DART engine, Dantzig solver;
step 0.001 s; friction coefficient 1
fast, accurate contact for control and learning
MuJoCo
step 0.002 s, semi-implicit Euler;
soft contact (0.02 s, damping ratio 1)
GPU physics, rendered cameras and lidars, robot learning
Isaac Sim
PhysX; 60 steps per second;
iterative solvers (PGS, TGS)
model-based design and verification
Drake
step 0.001 s;
hydroelastic contact over a surface
