

3 inputs

c_{t-1}
previous cell state
(long-term memory)

h_{t-1}
previous hidden state
(short-term memory)

LSTM cell at time step t

1. update the long-term memory
(remove old, add new)
2. compute the short-term memory

x_t
current input

2 outputs

c_t
new cell state

h_t
new hidden state
