

Making the largest value ten times larger moves the mean and SD, not the box

largest value 1500

$\text{IQR} = 328.25 - 234 = 94.25$

$\text{SD} = 406$

mean 377.6

largest value 15000

$\text{IQR} = 328.25 - 234 = 94.25$

$\text{SD} = 4664$

mean 1727.6
