

Categorical: one-hot label

$$L = -(1 \cdot \log 0.2 + 0 \cdot \log 0.3 + 0 \cdot \log 0.5) = 1.609$$

k products, $k - 1$ of them multiplied by 0

Sparse: integer label

$$L = -\log \hat{y}_c = -\log 0.2 = 1.609$$

one lookup, no one-hot vector stored
