

Variance = the average squared distance

each square's side is the face's distance from $E[X] = 3.5$; each face has probability $1/6$

face 1

$$(1 - 3.5)^2$$

6.25

face 2

$$(2 - 3.5)^2$$

2.25

face 3

$$(3 - 3.5)^2$$

0.25

face 4

$$(4 - 3.5)^2$$

0.25

face 5

$$(5 - 3.5)^2$$

2.25

face 6

$$(6 - 3.5)^2$$

6.25

average area
 $17.5/6 = 35/12$
 $= 2.917$

side = SD
 $= 1.708$
