

Chain-rule factor

$P(\text{toss lost} \mid \text{Mumbai, sunny, win})$

<i>toss</i>	<i>venue</i>	<i>outlook</i>
won	Chennai	sunny
won	Mumbai	sunny
lost	Chennai	sunny
won	Mumbai	overcast
won	Chennai	sunny

uses 1 winning match
toss lost in 0 of 1: estimate 0

Naive factor

$P(\text{toss lost} \mid \text{win})$

<i>toss</i>	<i>venue</i>	<i>outlook</i>
won	Chennai	sunny
won	Mumbai	sunny
lost	Chennai	sunny
won	Mumbai	overcast
won	Chennai	sunny

uses all 5 winning matches
toss lost in 1 of 5: estimate 0.2
