

One input: larger  $\alpha$ , flatter line

Degree 16:  $\alpha = 0$  overfits,  $\alpha = 200$  underfits

- |                                                                   |                                                                 |
