

every test ends the same way
compare p with $\alpha = 0.05$

$p \leq 0.05$: **reject H_0**

correlation $p = 1.2 \times 10^{-42}$

ANOVA $p < 0.001$

two-sample t $p = 0.00003$

$p > 0.05$: **fail to reject**

proportion $p = 0.30$

chi-square $p = 0.29$

one-sample t $p = 0.53$
